The errors identified by WAVE were that my images did not have alt text and the three buttons on the bottom “current song” player did not have aria-label attributes, so I made those corrections by adding a description of the photos using alt and labels to the bottom buttons using aria-label. I also added lang=“en” to the top of my index.html file as suggested during the accessibility lecture.

Turning off CSS, I think the website is still usable even though it doesn’t look very organized or aesthetically pleasing. The buttons on the sidebar, header, and navigation all appear on the top of the page followed by the artists, and finally the currently playing song at the very bottom. Thus, though the site doesn’t look very good without CSS, I believe the site to still be usable in that all the elements and buttons are there, just not laid out in a nice way.

The site is tabbable with and without CSS. All the buttons are reachable using the tab key.
